Description With the NodOn 2 button Wall Switch you can control Z-Wave devices such as lamps, shutters or switchable sockets directly (stand-alone mode). Connected to a Z-Wave control center, it is also possible to activate defined scenes by push of a key (gateway mode). The installation of this battery-operated wall switch is easy, because there are no cables to lay or to connect. The switch will be pushed into the mounting plate which will be fixed to any planar surface by double-sided adhesive tape or screws. With the NodOn Wall Switch, you can control your smart home devices and scenes – also at places where a conventional light switch is missing. Furthermore, functionality is more variously, because you can switch all lights simultaneously with only one push of a button. Dimming the light and driving shutters up and down is also possible with the NodOn Wall Switch. Features: 2-Button wall switch Direct device connection (Controller function) Scene control (only) via Z-Wave gateway Easy installation Available in 2 colors Power Supply: 1x CR3032 Battery Wireless Technology: Z-Wave Plus Dimensions: 80 x 80 x 15 mm
