Description The double relay wall switch by TKB Home is a wall switch with integrated double relays and 2 rocker buttons. The double relay can switch 2 electrical loads with 1,380 watts each. With the double shift paddle or via Z-Wave radio, you can control each load separately. Besides, further actions within the Z-Wave network can be triggered via double click. The wall switch can be easily connected to 2 electrical loads without installing a flush mounted module separately. The 2 relays are located inside a module which is directly connected to the wall switch with the paddles. With that TKB Home wall switch you can replace any switch insert or toggle switch. The wall switch can be mounted on any flush box. With TKB Home wall switches you can easily integrate your already installed lights into your home automation network. Without installing any news cable, you can switch your lighting as usual via wall switch – but thanks to Z-Wave technology also via remote control, smartphone or sensor-controlled automation. &nbsp;Features: Wall switch with double relay Double switch button Inclusive frame with rounded corners Replaces complete wall switch 2 Relays with 6 A / 1,380 W / 230 V AC each Integrated LED for indication on both paddles Works with single and double click Standby power consumption: &lt;0.8 W Wireless Technology: Z-Wave Plus Dimensions: 80x80x38 mm
